

### **LISTING OF CLAIMS**

Claims 1-10 (cancelled)

Claim 11 (original) - A method for loading dispensing means with thrombin and clotting proteins, the steps including:

attaching a plurality of said dispensing means to separate dispensing lines containing thrombin and clotting proteins;

manipulating said plurality of dispensing means to purge air in each of said dispensing lines; and

sequentially filling said plurality of dispensing means through each of said dispensing lines.

Claim 12 (new) - The method of claim 11 further including the step of:

clustering said plurality of dispensing means in pairs, with one of each said pair of dispensing means receiving thrombin and the other receiving clotting proteins.

Claim 13 (new) - The method of claim 12 further including the step of:

equipping each said dispensing means with a removable fitting for connection to one said dispensing line.

Claim 14 (new) - The method of claim 13 further including the step of:

securing each said pair of dispensing means in a frame, said frame including a retaining member.

Claim 15 (new) - The method of claim 14 further including the step of:

ensconcing each of said pairs of dispensing means in a membrane.

Claim 16 (new) - The method of claim 15 further including the step of:  
maintaining contents of said dispensing means at a desired temperature  
after filling.

Claim 17 (new) - The method of claim 15 further including the step of:  
introducing each said pair of dispensing means into a spraying means,  
said spraying means having means for simultaneous delivery of the thrombin and  
clotting proteins.

Claim 18 (new) - The method of claim 17 further including the step of:  
maintaining contents of said dispensing means in said spraying means at  
a desired temperature after filling.

Claim 19 (new) - The method of claim 14 further including the steps of:  
forming a membrane, said membrane having a gathered portion of  
accordion folds; and  
ensconcing each said pair of dispensing means in a separate membrane  
such that said membrane opens at an end opposite said dispensing lines, whereby  
removal or adjustment of said dispensing means may occur.

Claim 20 (new) - The method of claim 19 further including the step of:  
maintaining contents of said dispensing means at a desired temperature  
after filling.

Claim 21 (new) - The method of claim 19 further including the step of:

introducing each said pair of dispensing means into a spraying means, said spraying means having means for simultaneous delivery of the thrombin and clotting proteins.

Claim 22 (new) - The method of claim 21 further including the step of:

maintaining contents of said dispensing means in said spraying means at a desired temperature after filling.
